

ALTERNATIVE FUELS

**NEW
SERIES
30R
2010**

As usual, Dixie Chopper leads and others follow ... this time with our alternative power options and environmentally friendly units. Dixie Chopper is the first mower manufacturer to offer machines in four separate fuel options – compressed natural gas, propane, diesel,

and of course, gasoline. The latest alternative power option is the new Xcaliber Diesel, which is powered by a 4-cylinder, 36-horsepower Caterpillar engine. Meanwhile, the revolutionary new Eco-Eagle CNG model and Dixie Chopper propane-powered units offer “green,” more environmentally friendly mower alternatives that exceed all current emissions standards for a cleaner tomorrow.
